Technical Skills

Strong: JavaScript, jQuery, HTML5, CSS3, AngularJS, Angular Material, Firebase, AngularFire, Bootstrap, Materialize CSS, Photoshop, InDesign, Git, AJAX, JSON

Experienced: Wordpress, Illustrator, OpenCart, PHP, Leaflet JS, d3.js

Applications Developed

Real Value | *A data-visualization map that dynamically displays area ratings based on user-selected factors.* ([live](#) | [github](#))

- AngularJS (v1.x) and Angular Material for the front-end and PHP and Firebase for storing and manipulating data.
- Angular Leaflet JS with geoJSON data as a robust and flexible map solution with D3.js for data visualization.
- Exercised Scrum process and Agile development workflow with two other developers.

To-do For You | *An application that allows users to log in and add and track personalized to-do items.* ([live](#) | [github](#))

- AngularJS (v1.5), and Angular Material UI component-based frameworks to create a seamless to-do application.
- User authentication (email/password or Google log in) and CRUD operations through Firebase via AngularFire.

Meetup Map | *An application that returns open meetup events according to interest and location.* ([live](#) | [github](#))

- Used JavaScript, jQuery, and Materialize CSS to achieve great material design and user intuitive experience.
- AJAX requests with the following JSON APIs: Meetup, Google Maps & Geocoding, and YouTube. Used Postman.

Student Grade Table | *A robust grade-tracking bootstrap application.* ([live](#) | [github](#))

- Bootstrap fully responsive layout. Originally core JavaScript and jQuery. Refactored in AngularJS and Firebase.

Professional Experience

Costa Mesa, CA 2014

Bachelor of the Arts, Art History - California State University, Long Beach

Long Beach, CA 2011

Awarded President's list and Dean's list.

About Me

When not coding I'm most likely hiking, playing soccer, or catching up on Game of Thrones. I speak a little German, I like to read about science and tech, and I make a mean breakfast burrito.
